The One and the Art of Prophecy

Saturday, September 16, 2023

If people desired truth, then they would make the effort to be true. It is very simple, truth is the path to life, a lie is the path to death. It is a provable biological fact. One can only survive when they are not so delusional as to flatter themselves as being intelligent.

By biological fact, we are being evolved to be the most powerful life support system possible by the use of the memory of experience. The recursion of what we learn, of memory, gives us the Art of Prophecy, or again, predictive behavior also known as rational thought. However, like most delusions affecting mankind is the belief that one's self is rational, even though that same one does not even know what rational means.

As a thing is defined as a binary construct of a relative within correlatives, which affords us a Grammar Matrix of Common Grammar, Arithmetic, Algebra and Geometry, people assume that it does not matter that they cannot even pair one grammar with the others, or that it is by fact a test of being rational, of being sane.

My work is practice material for learning how to pair names with perception, and naming conventions of our Grammar Matrix with each other to test the results of what we believe to be true. So called mathematics are simply the operations which can be performed on information and these operations are common to all members of our Grammar Matrix. Our ability in effecting binary recursion is a test of our own mental ability. To date, I have not found even one rational person on the earth; not one.

In short, mankind does not know what it is, why it is, or how to do its biologically defined job, i.e., mankind is asleep and, in that sleep, they are a nightmare upon the earth.

Evolution is a slow process. All one can do to aid in that process is by placing things within the environment which incites reflection and examination, i.e., leaving behind an artifact. Plato explained it; the Bible demonstrates it.

The Universal Binary Codex

All a mind can do, is to read, using the bodies senses called perception; process those perceptions using binary recursion, and then use the results of that processing to effect human behavior. And, when it is functional, it becomes what evolution is making it; the most powerful life support system possible. To date, the human race has not even made a correct grammar book showing how to construct and use our Grammar Matrix. Mankind is currently apparently too stupid to live. All one can do is therefore brace one's self for the terror of evolution and hope for man's survival.

The Universal Binary Codex is the proof that the Universe functions using one, and only one set of operations to manage information; thus, evolution is toward accomplishing the use of those operations for survival. A mind is potentially the most powerful life support system possible; when it is functional, it will do that job.

Every compound operation is composed of these sample codes presented below. Historically, traditionally, these operations have been called mathematical, however as everything is a binary construct, and as binary recursion can only produce a binary result, they are the operations common not only to the whole Universe, but also to every possible expression of binary put into grammar systems; the intelligible part of the Universe. Binary recursion produces a Grammar Matrix just like the Grammar Matrix of DNA, which itself consists of four compounds.

The members of our Grammar Matrix are named: Common Grammar, Arithmetic, Algebra and Geometry after the four methods of effecting binary recursion.

The Universal Binary Codex shows us six operations, two of them arithmetic, four of them geometric. These operations, recursively applied, form all of information processing. Arithmetic operations are concerned with addition and subtraction, greater than and less than, while geometric operations are all proportional, multiplication, division, and exponential, or again, roots and powers. This Codex forms the root, the source of all Truth. In short, it can at least be used for proofing all grammatical processes.

With this Codex, one can construct any computer of any complexity, which will never have any processing time, i.e., the output of the computation is concurrent with the input which means it is independent even of the relative difference of time. This is because all of computation, correctly performed, only asserts correlatives, and a correlative is not a relative difference. So, when told that

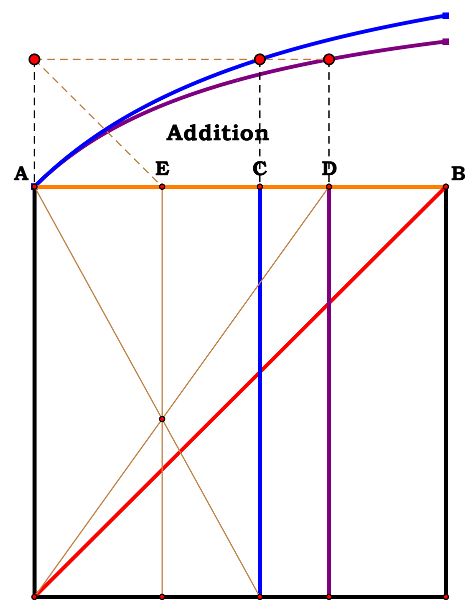

there is nothing faster than the speed of light, or talking about speed at all, we should remember that speed is a relative difference and that computation applies correlatives to the relative and it is not the relative. One cannot predicate that a correlative is a relative. The pure system of grammar, Geometry, only recognizes input while producing output at the same time.

Historically, mankind has trouble discerning the distinction between the relative and correlative, but that is because of man's stage of evolution.

Once one comprehends that a thing is defined as a binary construct, one can conclude that it also means thought is binary recursion and mastering these operations can be accomplished commensurate with one's own intelligence. Life and the evolution of that intelligence, is inevitable: and it also means that there is, as shown by the Codex, standards of behavior for that intelligence. The evolution of intelligence is commensurate with the principles of Language, i.e., the Universal Binary, which are *functionally* resident in the mind as a Grammar Matrix.

If one think about it, having only two concepts to use, these binary codes operate on their own and there is absolutely nothing arbitrary about them.

As of this date, Sunday, September 10, 2023, the following is part of the Basic Analog Grammar Sample Dictionary. It shows that any judgment can be made in truth and by pairing every member of our grammar matrix; Common Grammar, Arithmetic, Algebra and Geometry, using simple binary.

Motions in Roll Away the Stone.

The Circle in the Binary Unit was introduced in Swords on the Moon. Here, one can see that it can be set into motion, this Sample uses six different equations for that motion. It can be used also for the Observatory and, in the curve for exponential series so that the this Sample is actually small but, nevertheless sufficient.

These six different starting points for each research plate allows one to formulate a template equation which is the only difference between six different presentations of a plate.
